

SD-WAN Networking for the cloud era

Connect your people to the applications they need most. Use any desktop device or connectivity route, in the private or public cloud. Enjoy new levels of flexibility with NOW's Software-Defined Wide-Area Network (SD-WAN). Manage your network and applications centrally while having increased visibility and control of what's happening in your network.

VISIBILITY

greater transparency over your network

DEPLOY

new sites faster

SPEED

increased efficiency in network changes

RELIABILITY

cost effective and greater reliability

Is SD-WAN right for you?

If any of the following situations describe you or your organisation then an SD-WAN solution will be of benefit.

- 1** We're running SaaS or real time applications that are having performance challenges.
- 2** We can't measure or guarantee application performance across our network.
- 3** We're struggling to justify buying more comms capacity.
- 4** We have sites that we can't afford to make highly available.
- 5** It takes too long to get network changes done.

Benefits of NOW's SD-WAN

IMPROVED RELIABILITY

Using a 3 tier approach, each site can be designed to have its own SLA for availability and support. With options for mission critical sites, like data centres, through to branch sites. Fixed and wireless backup options can provide cost effective reliability and redundancy for even the smallest branch office for the most cost-effective reliability.

FASTER DEPLOYMENT

Advanced policy-based management, zero-touch provisioning and use of 4G mobile for remote sites or for backup services. Means sites can be up and running sooner. Similarly, policy management means changes can be made faster to support your business time frames.

CENTRALISED MANAGEMENT

Give priority to apps that are critical to your business through policy-based prioritisation and filtering.

ENTERPRISE NETWORK CONNECTIVITY

Application-based software-defined networking (SDN) to allow the creation of a private network and providing services like business-grade IP VPN and secure broadband internet.

SELF-SERVICE PORTAL

Customers can see real time and historic traffic information in an easy to consume format.

nuagenetworks

NOW has partnered with Nuage Networks (Nokia) to offer a world-class SD-WAN service. The first of its kind in New Zealand. We've taken the experience gained from overseas markets, to build a resilient SD-WAN service, tailored to the needs of kiwi businesses.
